

REPORT ON **SDF - II MINI PROJECT**

Submitted by:-

<i>Piyush Bhargav</i>	<i>(17103240)</i>
<i>Lalit Kumar Singh</i>	<i>(17103234)</i>
<i>Avi Mittal</i>	<i>(17103241)</i>

BANKING SYSTEM

The project is made only and only for the use of bank officials.

It gives them an easier way to perform various banking actions such as creating various types of accounts, updating their information's, removing any account and many more.

The project opens with a menu page wherein the bank official is asked to enter the master password to unlock the program. Entering the correct master password advances you to next screen whilst entering the wrong password 3 times forces the program to crash. This is done so as to maintain security of the details of the account holders and keep their precious hard earned money secure. If the correct master password is entered the program advances to the next screen in which a variety of choices are offered such as -

- 1) Create a new account
- 2) Update the information of any existing account
- 3) Remove any existing account
- 4) Check the details of any existing account
- 5) Make transaction from a specific account
- 6) View the list of all account holders
- 7) Log out
- 8) Log in logs
- 9) Exit the program

Integer type choice is taken from the official at the end of the each and every screen, choices are given whether to go back to the main menu or exit the program.

WORKING

After login in we proceed to the main menu area. There are multiple options for us in the menu. If 1 is entered then the program proceeds to create a new account. Various details are asked to be input from the user. the details asked are -

- 1) Today's date
 - 2) The desired account number of the user (if the desired account number is already owned by another customer then it is asked again)
 - 3) Name of the account holder
 - 4) Date of birth(in dd/mm/yyyy format)
 - 5) Age
 - 6) City in which the account holder is residing
 - 7) Aadhar number of the account holder as part of KYC initiative by the government
 - 8) Mobile number of the account holder (on which the bank can reach him any time during working hours and also for conveying transaction related details)
 - 9) The initial amount customer wishes to deposit in his account
 - 10) The type of account the customer wishes to open 5 choices are offered such as Savings account, Current account and Fixed Deposit account of three types- 1 year, 2 year and 3 year, The official has to enter this via keyboard).The interest rates given are 8%pa for savings account, 9%pa for fixed deposit of 1 year, 11% pa for fixed deposit of 2 year and 13% pa for fixed deposit of 3 year.
- Entering all these details successfully creates the new account.

VOILA!!

If 2 is entered then the program proceeds to update the information of any existing account. The official is asked to enter the account number of the user. If the entered account number exists then choice is given to update the information. Only two information's can be updated -

- 1)Address that is the city in which the account holder resides and
- 2)The phone number of the account holder. Integer type input is taken and the new details is asked after which the new detail is stored.

If 3 is entered then the program proceeds to delete the account of the user. Account number of the holder is asked and as soon as he presses enter account is deleted.

If 4 is entered then the program proceeds to check the various details of any existing account. Choice is given whether to show details by account number or by the name of the account holder after which all the details which were initially asked at the time of account opening. It also displays the interest the holder will get every month in case of savings account and in case of fixed deposit account, it will display the total interest the holder will get at end of his time period.

If 5 is entered then the program proceeds to make transactions from the account.It ask transactionfor two ways of transaction,cash and digital mode. Again account number is asked after which choices are given whether to deposit or to withdraw from the account. Later on, balance in the account is accordingly updated. In case of fixed deposit account, transactions will not be allowed and program will redirect to the main menu page.

If 6 is entered then the program proceeds to display the list of all account holders along with some of their information such as account number, name of account holder, city in which the account holder resides, active mobile phone number of the account holder and the current available balance in the account.

If 7 is entered then the program will log out the bank official and produce the main menu page on the screen.

If 8 is entered then the program will show all the log in logs.

If 9 is entered then the program will terminate after showing a thank you page.

WORK DIVISION-

- 1)Lalit Kumar - Functions of transaction from an account and viewing the details of a specific account along with the log-in screen.
- 2)Piyush Bhargav - Functions of updating the information of any account and creation of a new account and some part of Transaction function
- 3)Avi Mittal - Functions of viewing the list of all the account holders and removal of specific account along with the menu function and exit process.

DATA STRUCTURES USED-

- 1)Arrays
- 2)Stacks
